

## Header – Home Automation Adds Immediate Convenience to Any Lifestyle

Home Automation provides homeowners with an easy way to control lighting, room temperatures and blinds. Leviton's family of home automation products is a smart way to control the lighting in any home. Wireless communication, two-way control, remote and scene control are all effective ways to use standard dimmers and switches to control lighting, blinds and other household devices with one touch of a button.

Homeowners can use wireless home automation to turn on outdoor lights upstairs and downstairs. Wireless automation devices are useful for the automation of tasks associated with lighting, electronics and household appliances. The attractive scene controller customizes preset scenes that adjust lighting, room control and shade control in kitchens, living rooms, bedrooms, hallways and bathrooms of a home. A controller turns on entry lights or remotely controls landscape lighting to create a lived in look while away from the home. Leviton's home automation system improves the quality of life at home. These products provide added comfort and convenience to modern day life at home.

There are many benefits associated with Leviton's home automation system. Lights, appliances, timed events and scene transitions create a unique home lifestyle at the touch of a button. Pressing one button conveniently turns on groups of lights in and around a home. The reliable home automation system may be customized for each home. Energy conscience homeowners are assured that dimming and automatic scheduling of lights helps reduce power consumption in the home and reduces monthly electric bills. Shades, thermostats and other electrical devices in the home are easily controlled through a decorative home control system.
